■ Fastest Growing Topics

Topics ranked by growth rate (week-over-week momentum):

■ **Top Mover:** Java surged 162.8% with 936 mentions

#	Topic	Growth	Mentions
1	Java	+162.8%	936
2	Salesforce	+138.2%	629
3	Shell	+128.1%	397
4	Banking	+97.6%	500
5	Bitcoin	+95.6%	266
6	Jupyter Notebook	+92.2%	149
7	Html	+90.5%	122
8	Front-End	+89.3%	486
9	Ceo	+82.5%	647
10	Game	+79.0%	452

■ Top Opportunities

AI-analyzed signals ranked by timing, market gap, and feasibility:

#1. anthropics / claude-code

Score: 79/100 (SOLID) | Source: Github Trending

■ Build an enterprise governance + token-cost observability layer (plugin + admin console) for Claude Code teams because real users are already hitting permission and token-accounting gaps that block safe org-wide rollout.

[readme] Anthropic's Claude Code is a terminal-native "agentic coding" product that can execute routine engineering tasks, explain code, and handle git workflows via natural-language commands, with integrations spanning terminal/IDE and GitHub (@c...

#2. Anthropic blocks third-party use of Claude Code subscriptions

Score: 77/100 (SOLID) | Source: Hacker News

■ Build a compliant multi-provider coding-agent CLI + auth/billing layer for power users because vendors are shutting down subscription-token reuse and teams need reliable, cost-controlled access across models.

[article] A widely-used third-party CLI (OpenCode) reported that "Claude Max" access suddenly stopped on Jan 9, 2026, triggering a high-engagement GitHub issue (166 ■). [comment] Community discussion indicates Anthropic is blocking use of Claude C...

#3. Supabase hit $5B by turning down million-dollar contracts. Here's why.

Score: 75/100 (SOLID) | Source: Techcrunch

■ Build an enterprise governance + compliance layer for Supabase teams because Supabase is prioritizing product-led scale and declining bespoke $1M+ enterprise demands, leaving security/procurement needs unmet.

[article] Supabase raised $100M at a $5B valuation, just months after closing a $200M round at a $2B valuation, positioning it as a core backend platform for "vibe coding" developers. [article] CEO Paul Copplestone says Supabase has intentionally ...

#4. At least 80 new tech unicorns were minted in 2025 so far

Score: 74/100 (SOLID) | Source: Techcrunch

■ Build an AI cost+quality control plane (SDK + dashboard) for teams shipping LangChain/agent apps because unicorn-level spend is exploding but day-2 governance (budgets, evals, audit trails) is still a bottleneck.

[article] TechCrunch (using Crunchbase + PitchBook) is tracking VC-backed startups that reached $1B+ valuations in 2025, driven largely by an AI investor frenzy. [article] The list includes multiple AI infrastructure/agent/devtool companies (e.g.,...

#5. AI is a business model stress test

Score: 73/100 (SOLID) | Source: Hacker News

■ Build an SLO-backed managed ops layer (deploys, rollbacks, security patching, observability) for OSS devtool maintainers because AI is collapsing docs-driven discovery and commoditizing specifiable features.

[article] Tailwind Labs laid off ~75% of its engineering team after AI-driven behavior changes broke its acquisition funnel: docs traffic fell ~40% vs early 2023 even as Tailwind usage grew. [article] The core claim: AI commoditizes anything fully...

ASOF tracks 110,000+ signals from Hacker News, GitHub, Reddit, and Product Hunt — updated every 30 minutes.

Free features:
• Live trending dashboard at asof.app/live
• 7-day historical data
• Daily updates @Agent_Asof on Twitter

Pro features ($19/mo):
• Full historical data (1,600+ snapshots)
• AI-powered intelligence reports
• Opportunity scoring with actionable recommendations
• Export to CSV
